State-Space Modeling of the Relationship between Air Quality and Mortality
C.J. Murray, University of Houston; and C.R. Nelson, University of Washington

Exposure of Chronic Obstructive Pulmonary Disease Patients to Particulate Matter: Relationships between Personal and Ambient Air Concentrations
S.T. Ebel, AJ. Petkau, S. Vedal, T. Fisher, and M. Brauer, University of British Columbia

Method Comparisons for Particulate Nitrate, Elemental Carbon, and PM$_{2.5}$ Mass in Seven U.S. Cities
P. Bächli, M. Davey, G. Allen, and P. Koutrakis, Harvard School of Public Health

Characterization of Fine Particulate Matter Produced by Combustion of Residual Fuel Oil
G.P. Huffman, F.E. Huggins, N. Shah, and R. Huggins, University of Kentucky; W.P. Linak and C.A. Miller, U.S. Environmental Protection Agency; R.J. Pugmire and H.L.C. Meuzelaar, University of Utah; and M.S. Seehra and A. Manivannan, West Virginia University

Spatial Variability of Different Fractions of Particulate Matter within an Urban Environment and between Urban and Rural Sites
R. Röösli, C. Braun-Fahrländer, N. Künzli, and L. Oglesby, Institute for Social and Preventive Medicine, University of Basel; G. Thies and M. Carriènond, Air Quality Management Agency of Basel; P. Mathys, Institute for Mineralogy and Petrography, University of Basel; and J. Staehelin, Institute for Atmospheric Science

Use of a Continuous Nephelometer to Measure Personal Exposure to Particles during the U.S. Environmental Protection Agency Baltimore and Fresno Panel Studies

Personal Exposure to Fine Particulate Matter in Elderly Subjects: Relation between Personal, Indoor, and Outdoor Concentrations
N.A.H. Janssen, J.J. de Hartog, G. Hoek, and B. Brunekreef, Utrecht University; and T. Lanki, K. L. Timonen, and J. Pekkanen, National Public Health Institute, Finland

Systematic Biases in Measured PM$_{2.5}$ Values with U.S. Environmental Protection Agency-Approved Samplers at Owens Lake, California
D.M. Uno, E. Hardebeck, J. Parker, and B.G. Cox, Great Basin Unified Air Pollution Control District

Comparison of Short-Term Variations (15-Minute Averages) in Outdoor and Indoor PM$_{2.5}$ Concentrations
G. Ramachandran, J.L. Adgate, N. Hill, and K. Sexton, University of Minnesota School of Public Health; and G.C. Pratt and D. Bock, Minnesota Pollution Control Agency

Estimating Separately Personal Exposure to Ambient and Nonambient Particulate Matter for Epidemiology and Risk Assessment: Why and How
W.E. Wilson, D.T. Mage, and L.D. Grant, U.S. Environmental Protection Agency

Assessing the Relationship between Personal Particulate and Gaseous Exposures of Senior Citizens Living in Baltimore, Maryland
J.A. Sarnat, P. Koutrakis, and H.H. Suh, Harvard School of Public Health

Air Pollution and Hospital Admissions for Diseases of the Circulatory System in Three U.S. Metropolitan Areas
S.H. Moolgavkar, Fred Hutchinson Cancer Research Center

The Evolution of Particles in the Plume from a Large Coal-Fired Boiler with Flue Gas Desulfurization
R.E. Imhoff, R.L. Tanner, and R.J. Valente, Tennessee Valley Authority; and M. Luria, Hebrew University

Is Daily Mortality Associated Specifically with Fine Particles? Data Reconstruction and Replication of Analyses
R.J. Klemm, R.M. Mason, Jr., and C.M. Heilig, Klemm Analysis Group; L.M. Neas, U.S. Environmental Protection Agency; and D.W. Dockery, Harvard School of Public Health

Hourly Personal Exposures to Fine Particles and Gaseous Pollutants—Results from Baltimore, Maryland

Characterization of Indoor Particle Sources Using Continuous Mass and Size Monitors
C.M. Long, H.H. Suh, and P. Koutrakis, Harvard School of Public Health

Validity of Ambient Levels of Fine Particles as Surrogate for Personal Exposure to Outdoor Air Pollution—Results of the European EXPOLIS–EAS Study (Swiss Center Basel)
L. Oglesby, N. Künzli, M. Röösli, C. Braun-Fahrländer, P. Mathys and W. Stern, University of Basel; and M. Jantunen and A. Kousa, National Public Health Institute, Finland

Comparison of Computer Simulations of Total Lung Deposition to Human Subject Data in Healthy Test Subjects
R.A. Segal, North Carolina State University and U.S. Environmental Protection Agency; and T.B. Martonen and C.S. Kim, U.S. Environmental Protection Agency

Validity of Ambient Levels of Fine Particles as Surrogate for Personal Exposure to Outdoor Air Pollution—Results of the European EXPOLIS–EAS Study (Swiss Center Basel)
L. Oglesby, N. Künzli, M. Röösli, C. Braun-Fahrländer, P. Mathys and W. Stern, University of Basel; and M. Jantunen and A. Kousa, National Public Health Institute, Finland

Comparison of Computer Simulations of Total Lung Deposition to Human Subject Data in Healthy Test Subjects
R.A. Segal, North Carolina State University and U.S. Environmental Protection Agency; and T.B. Martonen and C.S. Kim, U.S. Environmental Protection Agency

Journal Table of Contents and Reprint Instructions
Listed below are the articles appearing in the July 2000 issue of the Journal of the Air & Waste Management Association. A full table of contents can be found by visiting the Journal on the A&WMA Web site, at www.awma.org, where A&WMA members can also access and print out complete Journal articles dating back to January 1997. Nonmembers and those without access to the Internet can purchase reprints of Journal articles by contacting Renee Mullin, A&WMA publications assistant, at (412) 232-3444, ext. 3179; e-mail: rmullin@awma.org. For membership and subscription information, please call A&WMA Member Services at (800) 270-3444.
